

# QualityMinds' Test Event

## Inspiration, development and knowledge

Develop your own testing knowledge along with that of your employees using Quality Minds' playful test event. Our test events are excellent team building activities and are a creative way of unlearning old habits, inspiring innovation and identifying new ways forward within your organisation.

### Our events are aimed at those who

- are looking to learn more about testing
- are interested in exploratory testing in particular
- want to find new ways of tackling test methodology or test design
- are looking for new inspiration
- are constantly searching for new ways forward

### Structure

Each event is made up of several elements. A brief introduction is then often followed by discussions and practical exercises – playful and active participation characterises the event.

### Our different event types in brief:

**Exploratory testing** – an exploratory testing methodology – *All testing is exploration. We share the experiences gained from applying this methodology.*

**Note Taking** in exploratory testing – to describe what you have done is an art – *Improve your test journals for quicker and better monitoring of your test work.*

**Dice Games** – exercise in test design and test methodology using Dice Games – *An exercise for anyone who is curious to know about testing. Appreciated by all job roles concerned with product development.*

**Test in cards** – supervised discussion about enhancement work – *Be inspired by our test cards and improve your efficiency, creativity and innovation by working with a test pack of cards.*

**Black & white stories** – asking questions is one of the most powerful skills for a tester - *We practice closed and open-ended questions by playing a game, discuss and develop the ability to ask the right questions.*

### Contact details
